

TAGORE DENTAL COLLEGE

WATER CONSERVATION ACTIVITY

Water saving nozzles are compact attachments to be fitted into taps which reduces water wastage upto 95%. They are designed to effuse only the required percentage of water in order to steer clear of wastage. Water saving nozzles have ability to cut down water scarcity by a significant amount and positively save upto 10,000 litres approx. of water per month. These water saving nozzles are installed in all the departments of Tagore dental college and hospital to save water.
